Cognitive Work Analysis: Coping with Complexity Dr Daniel P Jenkins, Dr Guy H Walker, Professor Neville A Stanton, Professor Paul M Salmon, 2012-10-01 Complex sociotechnical systems are systems made up of numerous interacting parts both human and non human operating in dynamic ambiguous and safety critical domains Cognitive Work Analysis CWA is a structured framework specifically developed for considering the development and analysis of these complex socio technical systems Unlike many human factors approaches CWA does not focus on how human system interaction should proceed normative modelling or how human system interaction currently works descriptive modelling Instead through a focus on constraints it develops a model of how work can be conducted within a given work domain without explicitly identifying specific sequences of actions formative modelling The framework leads the analyst to consider the environment the task takes place within and the effect of the imposed constraints on the way work can be conducted It provides guidance through the process of answering the questions of why the system exists what activities can be conducted within the domain as well as how these activities can be achieved and who can perform them The first part of the book contains a comprehensive description of CWA introducing it to the uninitiated It then presents a number of applications in complex military domains to explore and develop the benefits of CWA Unlike much of the previous literature particular attention is placed on exploring the CWA framework in its entirety This holistic approach focuses on the system environment the activity that takes place within it the strategies used to conduct this activity the way in which the constituent parts of the system both human and non human interact and the behaviour required Each stage of this analysis identifies the constraints governing the system it is contended that through this holistic understanding of constraints recommendations can be made for the design of system interaction increasing the ability of users to cope with unanticipated unexpected situations This book discusses the applicability of the approach in system analysis development and evaluation It provides process to what was previously a loosely defined framework

Leo Laporte's Technology

Almanac Leo Laporte, Michael Miller, 2005 Leo Laporte is TV and radio's most recognized and prolific technology personality best known for his humor, wit, and ability to teach both newcomers and grizzled PC veterans. In Leo Laporte's 2006 Technology Almanac, Leo provides a year's worth of anecdotes, tips, factoids, and musings about the machines at the center of your life. A page is devoted to each day of the year, and each page includes several elements: typically a single topic essay that takes up most of the page on subjects as varied as ergonomics, Easter eggs in popular programs, processor overclocking, and discount travel Web sites; and hints, tips, references to worthwhile software, and goofy trivia.
