Paulo Davim,2020-05-22 Modern Manufacturing Processes draws on the latest international research on traditional and non traditional practices to provide valuable advice on the digitization and automation of the manufacturing industry In addition to providing technical details for the correct implementation of the latest tools and practices the impacts on productivity and design quality are also examined The thorough classification of manufacturing processes will help readers to decide which technology is most effective for their requirements and

comparisons between modern and traditional methods will clarify the case for upgrading This comprehensive assessment of technologies will include additive manufacturing and industry 4.0 as well as hybrid methods where exceptional results have been gained through the use of traditional technology This collection of work by academics at the cutting edge of manufacturing research will help readers from a range of backgrounds to understand and apply these new technologies Explains how the correct implementation of modern manufacturing processes can help a factory gain the characteristics of an industry 4.0 business Explores what the main technical and business drivers for new manufacturing processes are today Provides detailed classifications and comparisons of traditional non traditional and hybrid manufacturing processes

Thermodynamic Mechanism of MQL Grinding with Nano Bio-lubricant Changhe Li, 2023-10-30 This book discusses the thermodynamic mechanism of MQL grinding with nano biological lubricant from the force heat surface integrity and micro morphology It makes up the fatal defect of the lack of heat transfer capability of traditional MQL grinding The machining accuracy surface quality especially surface integrity of the workpiece are significantly improved at the same time the service life of the grinding wheel is increased and the working environment is improved The general scope of the book's content is the effects of MQL grinding with nano bio lubricant on grinding force thermal mechanism and surface It provides a new method of sustainable green grinding for environment friendly resource saving and energy efficient utilization and solves the technical bottleneck of the insufficient capacity in MQL heat transfer

Introduction to Manufacturing Processes John A. Schey, 1987 This revision aims to address changes that have taken effect since the publication of the second edition The most significant change has been in the attitude of industry to concurrent engineering In 1987 mostly lip service was paid to it today it has become general practice in most competitive corporations In the second edition the author discussed this as the manufacturing system In the third edition it becomes the focal point Concurrent engineering involves the whole product realization process including product concept performance criteria mechanical design and analysis materials selection process planning and modeling production control automation assembly management and others An introductory text cannot possibly cover all of these topics hence the emphasis of the third edition remains on the physical principles and the application of these principles to processes The major difference relative to the second edition will be the emphasis on interactions between process and design Capabilities and limitations of processes will be highlighted to show what they mean in terms of design possibilities and design modifications will be suggested for ease of manufacture Impact on the environment and possibilities for recycling will be woven into the entire text
