

# Chapter 12: Wave properties

## Knowledge organiser

### Waves in air, fluids, and solids

Waves transfer energy from one place to another without transferring matter. Waves may be \_\_\_\_\_ or \_\_\_\_\_.

For waves in \_\_\_\_\_ and \_\_\_\_\_, it is the wave and not the substance that moves.

- When a light object is dropped into still water, it produces \_\_\_\_\_ (waves) on the water which \_\_\_\_\_, but neither the object nor the water moves with the ripples.
- When you speak, your voice has \_\_\_\_\_ making sound waves travel through the \_\_\_\_\_. The air itself does not travel away from your throat, otherwise a \_\_\_\_\_ would be created.

Mechanical waves require a \_\_\_\_\_ (a medium) to travel through.

Examples of mechanical waves include \_\_\_\_\_ waves, \_\_\_\_\_ waves, waves on \_\_\_\_\_ and ropes, and \_\_\_\_\_ waves produced by earthquakes.

When waves travel through a substance, the particles in the substance \_\_\_\_\_ (vibrate) and pass energy on to neighbouring particles.

### Transverse waves

The oscillations of a transverse wave are \_\_\_\_\_ (at right angles) to the direction in which the waves transfer energy.

\_\_\_\_\_ are an example of transverse waves.

### Longitudinal waves

The oscillations of a longitudinal wave are \_\_\_\_\_ to the direction in which the waves transfer energy.

Longitudinal waves cause particles in a substance to be \_\_\_\_\_ close together and \_\_\_\_\_ further apart, producing areas of \_\_\_\_\_ and \_\_\_\_\_ in the substance.

\_\_\_\_\_ in air are an example of longitudinal waves.

Wave motion is described by a number of properties.

Property	Description	Unit
amplitude $A$		
frequency $f$		
period $T$		
wavelength $\lambda$		
wave speed $v$		

### Properties of waves

Frequency and period are related by the equation:

$$\text{period } (s) = \frac{1}{\text{frequency } (Hz)} \quad T = \frac{1}{f}$$

Label the diagram.

All waves obey the wave equation:

$$\text{wave speed } (m/s) = \text{frequency } (Hz) \times \text{wavelength } (m) \quad v = f\lambda$$

When waves travel from one medium to another, their speed and wavelength may change but the frequency stays the same.

The speed of ripples on water can be slow enough to measure using a stopwatch and ruler, and applying the equation:

$$\text{speed } (m/s) = \frac{\text{distance}}{\text{time}}$$

The speed of sound in air can be measured by using a \_\_\_\_\_ to measure the time taken for a sound to travel a known distance, and applying the same equation.

### Reflection of waves

When waves arrive at the boundary between two different substances, one or more of the following things can happen:

- \_\_\_\_\_ - the energy of the waves is transferred to the energy stores of the substance they travel into (for example, when food is heated in a microwave)
- \_\_\_\_\_ - the waves bounce back
- \_\_\_\_\_ - the waves change speed and direction as they cross the boundary
- \_\_\_\_\_ - the waves carry on moving once they've crossed the boundary, but may be reflected

\_\_\_\_\_ can be used to show what happens when a wave is reflected at a surface.

To correctly draw a ray diagram for reflection:

1. use a \_\_\_\_\_ to draw all lines for the rays.
2. draw a single \_\_\_\_\_ on the rays to show the direction the wave is travelling.
3. draw a dashed line at \_\_\_\_\_ to the surface at the point of \_\_\_\_\_ (this line is normal to the surface).
4. label the normal, angle of incidence (\_\_\_\_), and angle of reflection (\_\_\_\_).

When reflection happens at a surface, the angle of incidence is always equal \_\_\_\_\_.

$$i = r$$

### Key terms

Make sure you can write a definition for these key terms.

direction amplitude compression frequency incidence longitudinal mechanical wave oscillate period ray diagram reflection refraction transmission transverse wavelength wave speed

**Mathematical Biology** James D. Murray, 2013-03-09 Mathematical biology the use of mathematical ideas and models in the biosciences is a fast growing very exciting and increasingly important interdisciplinary field This textbook is an account of some of the major techniques and models used and of some genuine practical applications drawn from current areas of research interest in for example population ecology developmental biology physiology epidemiology and evolution It provides the reader with a thorough background sufficient to start genuine interdisciplinary collaborative research with biomedical scientists

**Solutions In Action** Karl Lanngren, 2012-12-02 Solitons in Action is a collection of papers that discusses the concept of a wave packet or pulse known as a soliton One paper reviews the development of the solitary wave concept with emphasis on the difference between a solitary wave and a soliton The Korteweg de Vries KdV equation shows the interactions between infinite sets of conservation laws and the inverse scattering transform method The Backlund transform technique produces hierarchies of multisoliton solutions for nonlinear wave equations The Gel'fand Levitan algorithm can effect an inverse scattering calculation that relates changes in the scattering data to changes in the solution of corresponding wave equation One paper points out that concepts in differential geometry can show the fundamental nature of soliton behavior and the relationship between inverse scattering and the Backlund transformation Solitons in action can be viewed as magnetic flux propagates through a gap between two closely spaced superconductors in quantum units This view results in a simplified procedure for perturbation expansions around multisoliton solutions This collection can prove useful for researchers involved in the study of fluid mechanics of pure and applied sciences of mathematical sciences and of wave theory
