

- 1 Read the passage below about flu and then answer the questions that follow.

Flu can be unpleasant, but if you are otherwise healthy it will usually clear up on its own within a week. Antiviral medicine can lessen the symptoms of flu and shorten its duration, but antibiotics are of no use.

However, flu can be more severe in certain risk groups and it is recommended that people in these groups have a flu vaccine. Over time, protection from the injected flu vaccine gradually decreases and flu strains often change. So, new flu vaccines are produced each year, which is why people advised to have the flu jab need it every year.

When flu is spreading widely, apart from vaccination, hygiene is the only other method that can help prevent it spreading further. In January 2011, the government launched a campaign to reduce spread of the flu virus. The 'Catch it, Bin it, Kill it' campaign recommended people carry tissues to catch coughs and sneezes, dispose of the tissue as soon as possible and then kill germs as soon as possible by washing their hands.

- a) Suggest two ways that the flu virus is likely to be spread.

[2]

- b) Why are antibiotics of no use in the treatment of flu?

[2]

- c) Give an example of a person who may fall into an at risk group.

[1]

- d) A person who has been vaccinated against flu may continue to have antibodies against the virus in their blood a year later, but may still catch flu. Explain why.
