### **Handbook of Research on Emerging Digital Tools for Architectural Surveying, Modeling, and Representation**

Brusaporci, Stefano, 2015-07-13 Technological revolutions have changed the field of architecture exponentially. The advent of new technologies and digital tools will continue to advance the work of architects globally, aiding in architectural design, planning, implementation, and restoration. The *Handbook of Research on Emerging Digital Tools for Architectural Surveying, Modeling, and Representation* presents expansive coverage on the latest trends and digital solutions being applied to architectural heritage. Spanning two volumes of research-based content, this publication is an all-encompassing reference source for scholars, IT professionals, engineers, architects, and business managers interested in current methodologies, concepts, and instruments being used in the field of architecture. *3D Synthetic Environment Reconstruction* Mahdi Abdelguerfi, 2012-12-06

Although synthetic environments were traditionally used in military settings for mission rehearsal and simulations, their use is rapidly spreading to a variety of applications in the commercial research and industrial sectors, such as flight training for commercial aircraft, city planning, car safety research, in real-time traffic simulations, and video games. *3D Synthetic Environment Reconstruction* contains seven invited chapters from leading experts in the field, bringing together a coherent body of recent knowledge relating to 3D geospatial data collection, design issues, and techniques used in synthetic environments, design, implementation, and interoperability. In particular, this book describes new techniques for the generation of Synthetic Environments with increased resolution and rich attribution, both essential for accurate modeling and simulation. This book also deals with the interoperability of models and simulations, which is necessary for facilitating the reuse of modeling and simulation components. *3D Synthetic Environment Reconstruction* is an excellent reference for researchers and practitioners in the field. *Journal of Rehabilitation Research & Development*, 2006 **Journal of Rehabilitation R & D**, 2006

*Structure from Motion in the Geosciences* Jonathan L. Carrivick, Mark W. Smith, Duncan J. Quincey, 2016-07-15 *Structure from Motion with Multi View Stereo* provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and with multi-temporal data to detect elevation, position, and volumetric changes that are symptomatic of earth surface processes. This book firstly places *Structure from Motion* in the context of other digital surveying methods and details the *Structure from Motion* workflow, including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of *Structure from Motion* in the geosciences, provides a synthesis of recent validation studies, and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students, and industry professionals because it balances technical knowledge of the *Structure from Motion* workflow with

practical guidelines for image acquisition image processing and data quality assessment and includes case studies that have been contributed by experts from around the world

**Collision Documentation** Christopher D Armstrong, 2018-11-02 The last ten years have seen explosive growth in the technology available to the collision analyst changing the way reconstruction is practiced in fundamental ways The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data create 3D models and visualize and analyze crash vehicles and environments The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction Because of the technological changes occurring in the industry many SAE papers have been written to address the validation and use of new tools for collision reconstruction Collision Reconstruction Methodologies Volumes 1 12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field Topics featured in the series include Night Vision Study and Photogrammetry Vehicle Event Data Recorders Motorcycle Heavy Vehicle Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction appealing to crash analysts consultants and safety engineers alike Click here to purchase the entire set at a discount
