Berman, Vladimir S. Malinovsky, 2011-01-02 Principles of Laser Spectroscopy and Quantum Optics is an essential textbook for graduate students studying the interaction of optical fields with atoms It also serves as an ideal reference text for researchers working in the fields of laser spectroscopy and quantum optics The book provides a rigorous introduction to the prototypical problems of radiation fields interacting with two and three level atomic systems It examines the interaction of radiation with both atomic vapors and condensed matter systems the density matrix and the Bloch vector and applications involving linear absorption and saturation spectroscopy Other topics include hole burning dark states slow light and coherent transient spectroscopy as well as atom optics and atom interferometry In the second half of the text the authors consider applications in which the radiation field is quantized Topics include spontaneous decay optical pumping sub Doppler laser cooling the Heisenberg equations of motion for atomic and field operators and light scattering by atoms in both weak and strong external fields The concluding chapter offers methods for creating entangled and spin squeezed states of matter Instructors can create a one semester course based on this book by combining the introductory chapters with a selection of the more advanced material A solutions manual is available to teachers Rigorous introduction to the interaction of optical fields with atoms Applications include linear and nonlinear spectroscopy dark states and slow light Extensive chapter on atom optics and atom interferometry Conclusion explores entangled and spin squeezed states of matter Solutions manual available only to teachers *Dynamics Of Non-linear Optical Systems - Proceedings Of The International Workshop* L. Pesquera, F. J. Bermejo, 1989-04-01 The meeting will provide an up to date state of the art exposition of results and techniques concerning theoretical and experimental studies of optical devices showing strong non linear behaviour Special attention will be paid towards the production of intense squeezed and sub Poissonian light formation of spatial patterns in laser systems atomic dynamics in intense laser fields and the characterization of instabilities and chaotic dynamics in optical media **Lasers** Peter W. Selected Papers on Computer-generated Holograms and Diffractive Optics Sing H. Lee,1992 An important feature of computer generated holograms CGHs is to create wavefronts that may be defined only mathematically Since A W Lohmann and his colleagues invented CGHs in 1966 for spatial filtering in image processing the applications of CGHs have multiplied to include 3 D display optical testing diffractive binary optics bifocal intraocular lenses wavefront transformations for material processing pickup heads for optical disks focal plane array detection coherent laser addition beam steering and optical interconnects for parallel computing and neural computing Today the applications of CGHs continue to expand This book features a selection of papers that examine different aspects of the development of CGHs from the 1960s through 1990 because there is no substitute for reading the original papers on any subject even if that subject is mature enough to have many single aspect monographs and textbooks It is hoped that this selection of papers will be valuable additions to many working libraries on this expanding expansive subject **American Journal of Physics** ,2000 **Optical Engineering** ,1994 Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology **General physics, relativity, astronomy and mathematical physics and methods** ,1993 **Physics Letters** ,2001 General physics atomic physics molecular physics and solid state physics
