## BRICK VENEER & WALL TIES

- Wall ties are used to anchor the brick veneer to wood framed walls.
- Wall ties are made of 1/4 to 3/8-gauge hot-dipped galvanized steel.
- Wall Tie Width: 1 1/2"
- Wall Tie Length: 3 1/2" with 2" bends.
- One end of the wall tie must be nailed to the wood stud wall and the other end must be embedded in the mortar joints.
- Wall tie spacing: 16" in the horizontal direction and 24" in the vertical direction.
- Brick veneers placed as face bricks on the outside of a concrete masonry unit wall; wall ties must be fast with one end embedded in the mortar of the brick veneer and the other end embedded in the mortar of the concrete masonry unit wall.
- Column and beam flange straps are used to anchor brick veneer to structural steel framing.
- One end of the strap hooks must be around the flanges of the beam or column and the other end must be embedded in the mortar of the brick veneer or concrete masonry unit.

# ESTIMATING STONE MASONRY

## STONE MASONRY

- Natural stones for construction include: sandstone, limestone, dolomite, slate, granite, marble, etc.
- Note: Artificial stone is available in many areas.
- Each kind of stone and work should be estimated separately.
- The cost of stone in place can be estimated by the cubic yard, ton, cubic foot, square foot or linear foot.

## COST OF STONE

- The cost of stone varies according to the kind of stone, extent of cutting done at the quarry and the location of use of the stone.
- No estimate should be made without obtaining current prices for the particular stone.
- The cost of freight must be added to the total cost.
- Stone suitable for rubble masonry may be priced by the ton.
- Stones may be purchased at the quarry in large rough-cut blocks, hauled to the job and then cut to the desired sizes and shapes.
- The cost of blocks may be based on the volume.
- Note: The largest dimensions are used in determining the volume. The cost may also be based on the weight of the stone.
- Stones used for ashlar masonry may be priced by the ton, cubic foot or square foot of wall area for a specified thickness.

## ESTIMATING MORTAR FOR STONE MASONRY

- The mortar used for setting stones is similar to that used for brick masonry.
- Sometimes special non-staining white or stone-set cement may be specified instead of gray Portland cement. Check your specifications thoroughly.
- Hydrated lime is often added to improve the working properties of the mortar.
- The quantity of mortar required for joints will vary considerably based on type of bond, thickness of joints and size of stones used.

## QUANTITIES OF MORTAR REQUIRED PER CY OF STONE MASONRY
