*Safety of Breast Pumps and Expressed Breast Milk Use Amongst Nursing Mothers and Healthy Term Babies* Alabi Temitope John, 2021-06-08 The growing awareness of the benefits of exclusive breast feeding is reason why many nursing mothers are opting to adopt the practice Emerging barriers however threaten adherence to its required duration and exclusivity A possible strategy that could address most of the commonly reported complaints is the use of breast pumps by nursing mothers and expressed breast milk for healthy term babies This review of scientific literature which examined its safety shows that in spite of the huge benefits and positive roles that the device could play in supporting exclusive breast feeding significant number of users suffer discomfort breast pain and tissue damage Also its effectiveness in supporting nursing mothers to achieving the required duration and exclusivity has not been confirmed In addition bottle feeding puts babies at higher risks of developing Malocclusions and other forms of oral diseases while the mechanism by which bottle fed infants tends to overfeed is unclear Therefore training sessions on hand expression of breast milk and personal hygiene are recommended for inclusion into ante and post natal clinics as an alternative for nursing mothers who might have serious complaints with the device

Moreover further studies to refine the dynamics of breast pump operation so as to address complaints by nursing mothers are also advocated Clinics in Human Lactation, Vol 10: Breast Pump & Pumping Protocols Executive Director National Alliance for Breastfeeding Advocacy Marsha Walker, Marsha Walker, 2012-06-01 Are you a pregnant mom who will be going back to work after you have your baby Are you worried about how to pump while working Do you work with pregnant or breastfeeding women who plan to pump their milk after they go back to work Do you need more information on pumps and pumping to increase duration of breastfeeding among your clients Pumping breastmilk is a very personal behavior for most women Surveys indicate women want a pump that works quickly obtains a sufficient quantity of milk from each breast and does not cause pain A pump that works for one mom may not work as well for another mom for a variety of reasons Many mothers have found interventions and techniques that make their pumps work better In this three part book Marsha Walker RN IBCLC shares information on the history and regulation of breast pumps the mechanics of pumps a review of the literature types of pumps ways to pump more effectively flanges how to choose a pump pumping protocols how to troubleshoot problems and how to deal with low milk supply If you want to know more about breast pumps and tips and techniques for pumping more milk this is the book for you Pumps and Pumping Protocols Executive Director National Alliance for Breastfeeding Advocacy Marsha Walker, Marsha Walker, 2017-01-06 Are you a pregnant mom who will be going back to work after you have your baby Are you worried about how to pump while working Do you work with pregnant or breastfeeding women who plan to pump their milk after they go back to work Do you need more information on pumps and pumping to increase duration of breastfeeding among your clients Pumping breastmilk is a very personal behavior for most women Surveys indicate women want a pump that works quickly obtains a sufficient quantity of milk from each breast and does not cause pain A pump that works for one mom may not work as well for another mom for a variety of reasons Many mothers have found interventions and techniques that make their pumps work better In this three part book Marsha Walker RN IBCLC shares information on the history and regulation of breast pumps the mechanics of pumps a review of the literature types of pumps ways to pump more effectively flanges how to choose a pump pumping protocols how to troubleshoot problems and how to deal with low milk supply If you want to know more about breast pumps and tips and techniques for pumping more milk this is the book for you Design and Development of a Manual Breast Pump Nur Atiqah Ramlan, 2010 This thesis deals with design and development of a manual breast pump with an ergonomic approach This project is the further study of the previous project which is the preliminary design of the manual breast pump The purpose of this study is to prevent the musculoskeletal disorder problems among mothers who expressed the breast milk using manual breast pump The objectives of this study is to design a manual breast pump with ergonomics approach using Solidworks to make a prototype of the designed manual breast pump using Rapid Prototyping machine and to validate the designed manual breast pump using simulation process and manual calculation The scope of this project is that the developed manual breast

pump is only a prototype and is not readily functional as a commercial product While the validations of the manual breast pump through the simulation software is considered precise The strategy of validation of finite element analysis was developed for this project The finite element analysis was then performed using ALGOR and the bottle part of the design was analyzed using the static stress with linear material model The other part of the design which is the pressure pump was also manually calculated The obtained results indicate that the maximum value of the result shows in the bottom of the bottle due to the surface boundary condition The manual calculation of the pressure pump shows that the design just can produce the maximum pressure of about 4 000 Pa While a good manual breast pump should produce at least about 2 000 Pa However the area is not suitable to be reducing in a great number due to the ergonomics condition
